

Newfoundland and Labrador Hydro Public Safety Advisory

December 21, 2014 – Newfoundland and Labrador Hydro is advising residents, cabin owners and travellers in the Star Lake and Granite Canal areas of Central Newfoundland that the Company continues to release water at the Star Lake Spillway into Star Brook and then Red Indian Lake.

The Company has initiated a controlled release of water at the Granite Canal Bypass structure and at the Granite Overflow Dykes along the Burnt Dam access road into Grey River.

People are advised to use reservoir areas with great caution as water levels and flows are unpredictable.
